

FMS – FPT SOFTWARE MANAGEMENT SUITE

Document Installation Guide

Ha noi, 27 Oct 2009

System requirement before install FMS:

- Oracle 9i Database Server.
- JBOSS 4.x or higher.
- Java 6 (All package were built by java 6)

Step for install:

1. Run script SQL to create system FMS database.

- Run **sql\FMS_All.sql** to create database schema.
- Run **sql\FMS_Fix.sql** to update structure database.

2. Define data sources for Jboss

- Modify <connection-url>, <user-name> and <password> in the datasources\FMS-ds.xml file according to your databases
- Copy the data sources xml file into <Jboss_Installed_Dir>\server\default\deploy
- Copy jdbc\classes12.jar file (Oracle JDBC) into <Jboss_Installed_Dir>\common\lib

3. Deploy FMS on Jboss

- Copy all file in the "packages" folder into <Jboss_Installed_Dir>\server\default\deploy
- Start/Restart Jboss

Step Using FMS

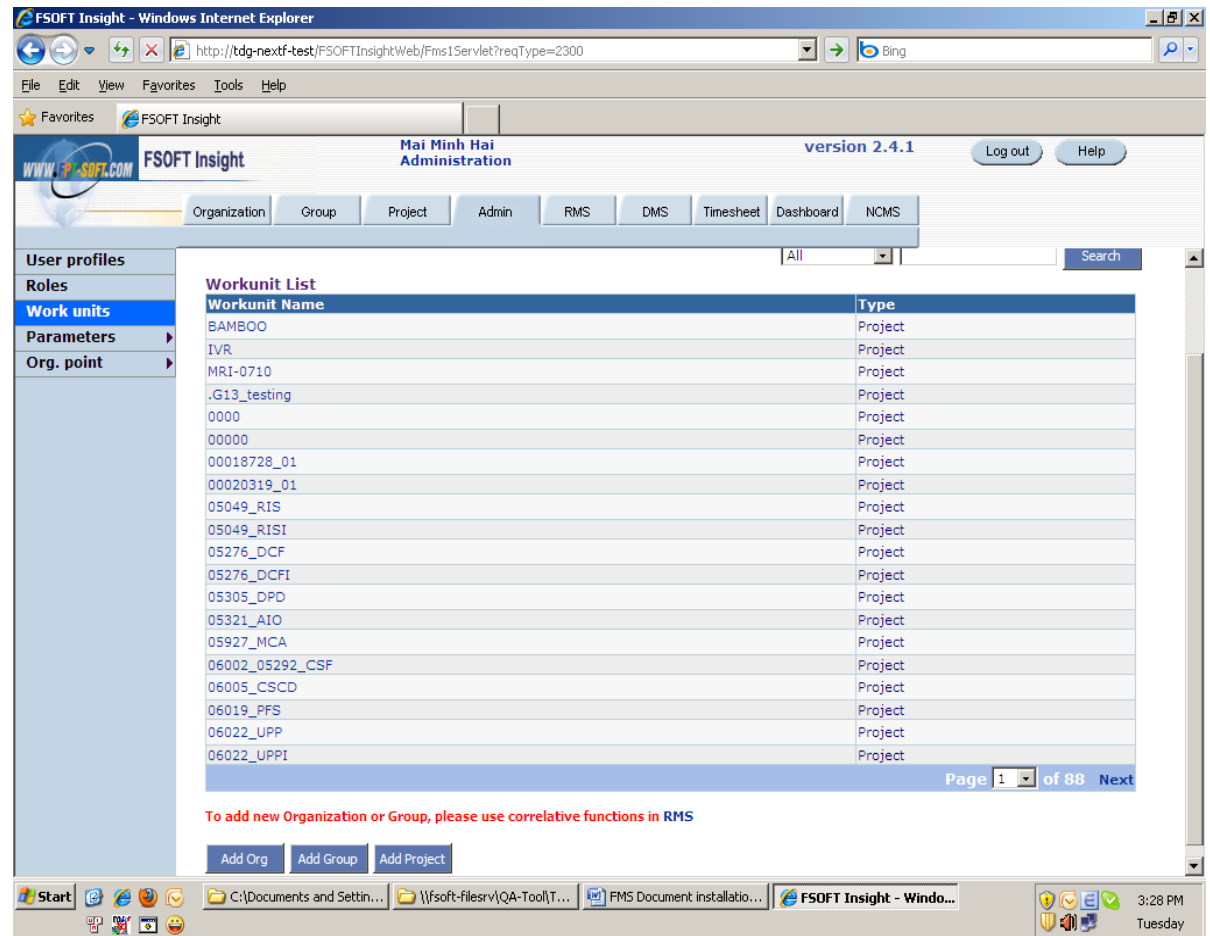

You can login system with account default:

- UserName: sysadmin
